

Deliverable 3: Describe your experience with this assignment, specifically:

- What challenges did you encounter with this assignment, if any?

Although this assignment is not the first time for me to use unittest, I still needed to review before I start coding. And I tend to forget about distinguishing integers/floats from strings quite often.

- What did you think about the requirements specification for this assignment?

Very clear and straightforward. I appreciate the partial solution that was given to us. Very helpful in giving me a framework for this assignment.

- What challenges did you encounter with the tools?

Not much.

- Describe the criteria you used to determine that you had sufficient test cases, i.e. how did you know you were done?

I first make sure I put into consideration the difference between strings and numbers. Then I try to include many test cases that meet or don't meet the criteria of right, equilateral, isosceles and scalene triangles.
